# The "Whole" Story Remains Confidential

Nothing is as simple as it seems. There have been so many assumptions made as to the Board's actions in June as to the reason a Board Member was removed. Unfortunately those assumptions have been believed to be the whole story when in actuality these assumptions fall way short of the whole story.

As stated in RCSC Corporate Bylaws "All matters discussed in an Executive Session shall remain confidential indefinitely. Executive Sessions may be called separately or during any meeting of the Board or Membership. The Board has the authority to take final action in Executive Sessions and is not required to reveal those decisions." Even though we have received demands for answers, that information is confidential and cannot be shared. However, there is way more to the "story" than the assumptions that are being rumored.

There has been some confusion as to what is meant by a conflict of interest. When becoming a Board Member we have to follow the Board Authority and Duties stated in the RCSC Corporate Bylaws. In those Bylaws it is stated, "The Board's fiduciary duty requires the Board of Directors to act in the best interests and for the benefit of the Corporation. This duty requires the Board of Directors to avoid conflicts of interest and acting out of self-interest; and to act as reasonable people in conducting the affairs of the Corporation." I was asked in an email what I personally would do if a situation arose where the Board has to make a decision on a club in which I am a member. If a vote was called on such a situation I would have to recuse myself from this vote. That would also mean it would be a conflict of interest for me to make a motion involving a club in which I am a member. All Board Candidates must sign a Board of Directors Conflict of Interest Form before we were ever accepted as a candidate for the Board.

Board Members are volunteers. Being on the Board is a privilege but it is also a huge commitment. Not only are Board Members expected to be present at twenty Board Meetings

each year but also do their homework before the meeting to be able to wisely make a decision on their vote. Board Members also chair or co-chair standing committees that meet throughout the year which takes preparation time. Quite often Board Candidates have a personal agenda when they run for the Board but they quickly learn that their focus has to be on the best interests of the Corporation and they alone cannot get something done unless the other members of the Board agree with them. Board Members do listen to card holders

**Sue Wilson RCSC Board President** 

and if those ideas are in the best interest of all members and RCSC, they will present those ideas in a motion to the Board. One of the issues right now besides fixing Lakeview Lake and dealing with the water restrictions coming down, is working with the Pickleball Club on keeping and possibly increasing the amount of Pickleball Courts available. The Board and Senior Management are working on that.

I realize there is a call for the Board to answer why a Board Member was removed. Again what happens in an Executive Session is confidential and cannot be discussed. For those making any assumptions you do not know the whole "story" and nothing is as simple as it seems.

# The Difference Between Pitch & Chip

Both the pitch and the chip are a part of the short game. They are both shots used to get the ball onto the putting surface as you get closer to the green. What is the difference between the two and when should you use each?

First, let's discuss the difference between the two shots. I like to think of the "pitch" as a lofted shot where the ball spends most of the time in the air and has a soft landing with little roll. Visualize an underhand softball pitch. On the other hand, with the "chip" the ball spends a short amount of time in the air (just enough to bump over the longer grass) and half or more of the time rolling along the ground. Visualize a putt with a little jump start!

So, when to use the pitch vs when to use the chip?

Use the pitch when you need the ball to get up and loft over something (mound of grass, bunker, cart path) and then there isn't much green left to let the ball roll to the flag.

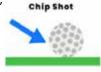

Use the chip when you just need the ball to bump up and over a smaller amount of grass to get it onto the green and then you have some green left to roll the ball to the hole. We used to refer to this shot as a bump and run!

Remember the general rule is that you have always have more control when the ball is rolling on the ground so get it on the ground as soon

as possible. For that reason, using the putter might be your first option. Your second option would be to consider the chip and the third would be the pitch.

Strike Point for Chip vs. Pitch Shot; Graphics: Rookieroad.com

These are the shots that really can make a difference in your score and it's fun to be creative and experiment with which clubs work best for you for both these shots. Just remember...pick the easiest, highest percentage shot and you'll probably do better!

#### **Water Conservation**

# Harvest Rainwater to Save Money

After several years of "non"-soons, those who spent this summer here in Sun City got to experience both the joys and heartaches of what the monsoon season can really do.

While the storms may have woken us in the middle of the night and frightened our pets, the rain on rooftops was music to our ears - provided it didn't leak. Streets flooded and rock washed away from places that stumped many who have been here for years.

Rainwater from such downpours can be both a blessing and curse but these storms are truly a godsend here in the desert, especially as we continue to experience historical drought conditions that will impact us for many years to come.

The sheer force and destruction of water's capabilities is unimaginable to those who are unfamiliar with our monsoon rainstorms. What can be a trickle at one moment might turn into a raging river is a matter of minutes. Care, caution and common sense are what keep people safe. Never put yourself in danger.

However, there is much good that can come from keen observations and a willingness to conserve this precious resource. If you're here when these storms occur, where does the water run on our property? Is it possible to contain what is coming off your roof and to use it for watering plants at a later time?

Remember, the key to water harvesting is to "slow it, spread it and sink it" on your property to make the most of this resource, potentially saving yourself money as well. For example, did you turn your irrigation system off while it was pouring down rain? With a little planning and work, you can make some minor changes and re-direct water run-off to various areas in your landscaping so that mother nature can do her job with a little direction and save a bit on your water bill.

We've got one more month of monsoon season; hopefully it will rain some more – we need it. Pay attention and watch what happens in your yard. Then do some research to find the best ways to make the most out of what literally falls from the sky.

# Tips from Get Fit for Life

# Will Women "Bulk Up" Lifting Weights?

The answer to this often asked question is NO, according to Jane Fortier, fitness specialist with Get Fit for Life. "Women will not "bulk up" if they lift weights - even heavy ones! Many women have a fear of turning into Arnold Schwarzenegger, if they so much as touch a 10-pound dumbbell. Women cannot and will not "bulk up" if they start lifting weights, and there are many science-based reasons why. Lifting weights will, however, produce numerous health benefits for women. It's ridiculous to think women shouldn't have well-defined muscles. Terms like "lean muscle" and "tone up" have been created by marketing gurus, who know that some women are fearful of strength exercise. These softer, descriptive terms have allowed women to be more comfortable, as they move forward with strength exercise and discover its true benefits." Here are four reasons to stop believing that lifting weights makes women "bulky".

- #1 It's hard work for women to visually "bulk up" muscle. This is good news for some, bad news for others -- it's great news for women who are afraid of packing on too much muscle. Building muscle SIZE and MASS (referred to as "Bulk") is a long, slow process that requires years of consistency, dedication and effort. Most women would never put in enough time or effort, to create the kind of physique they are afraid of. It takes years to put on the muscle mass that bodybuilders have. Professional bodybuilders are an elite few, only because they are willing to work consistently to excel.
- #2 Women don't have enough testosterone to get bulky. Women don't produce as much testosterone as men. Testosterone production is a huge factor in muscle growth. Of course, there are always exceptions: Some women have higher testosterone levels than other women, but even those with higher-than-average testosterone, most likely don't have enough to produce bulky muscles.
- #3 Women won't usually make the eating commitment required for developing extensive muscle mass. To build muscle, a person must eat MORE calories than they would burn. New tissue needs fuel to grow. Muscle growth will not reach full potential, if a person eats a calorie-restricted or calorie-maintenance diet. Most women who are concerned about body size, don't eat enough calories or enough protein to support significant muscle mass growth. The recommended calorie intake for a healthy woman is between 1,800 and 2,400 calories. If a woman exercises, she probably would need to meet the higher end of that range, and possibly more because of body height or activity level. If a woman isn't normally eating more than maintenance-level calories each day, muscle bulk would be impossible. Packing on a lot of muscle takes more calories, more protein, more supplements, and more testosterone than one might think.
- #4 Women, generally, don't lift heavy enough weight, or lift often enough, to get bulky. Muscles don't grow in response to tasks they're used to. Muscles growth comes from challenge. One needs to progressively overload lifts, to encourage muscles to grow. Muscles have no reason to get bigger if there is no demand. To add more muscle mass, two primary rules need to be a part of the workouts: 1} lift in the correct rep range (8 to 15 reps per set); and 2} lift to fatigue. Those two guidelines only work for so long -- eventually, it's necessary to add new approaches, like drop sets, super sets, pyramid sets and repping to failure, These techniques send stronger muscle-building signals to the brain. Frequency is another key factor in building muscle. Studies show that training a muscle more often, makes it grow, in a shorter period of time.

Women who lift weights won't get bulky. What they will achieve is diminished body fat and a toned, lean muscle appearance. Beyond aesthetics, women who lift weights will experience improved bone density, weight loss, better body composition, renewed flexibility/mobility and sharper mental clarity. Strength exercise makes a woman feel strong, empowered and confident. Getting started with strength exercise is overwhelming. Get Fit for Life Personal Trainers simplify things by developing custom-designed programs that take into consideration needs and medical issues. Trainers are available in all Sun City Fitness Centers. For more information about working with a Get Fit for Life Trainer, call 623-696-6820 or visit Get Fit for Life Sun City on Facebook.
